Gold Enterprise Resource Planning

Microsoft Dynamics AX 2012 for Construction

MICROSOFT DYNAMICS AX 2012

Having visibility into your projects in real-time and the ability to track their profitability and progress can not only help you meet deadlines and budgets, but can also help you avoid costly rework and closing delays and manage increased complexity and project risks. Through our experience working with Construction companies, we know the right technology can empower your people and build profits. That's why we offer business solutions from Microsoft.

When Microsoft Dynamics® AX 2012 was released it set the new standard for business management systems. Microsoft Dynamics AX 2012 is not only a comprehensive Enterprise Resource Planning (ERP) solution that delivers rich, prebuilt, industry-operational features out of the box; it is also a powerful solution that goes beyond the traditional ERP software. Typical ERP systems manage the administrative functions of a business (financial and human resources). Instead, Microsoft Dynamics AX incorporates both the administrative *and* operational management requirements, providing an enterprise-wide view of the organization for well-informed management and decision making.

With Microsoft Dynamics AX 2012, Construction companies realize value faster with a strong platform that allows us to deliver the specialized functionality unique to the Construction industry. Microsoft's strong base functionality and a specific Construction solution means a better fit for the needs of your business - more value and more rapid time to value.

Microsoft Dynamics AX 2012 is a truly global solution that is designed to scale with the growth of a business. It is simple enough to deploy for a single business unit in a single

country, yet easily scalable to support requirements for 36 countries, multiple currencies, multiple time zones, multiple languages, and compliance with multiple banking and reporting standards and legislative codes.

CONSTRUCTION SOFTWARE SOLUTION

Microsoft Dynamics AX 2012 is designed to meet the business requirements of the Construction industry. It provides the functionality to manage the operations needs of these companies, and is flexible enough to expand to highly complex, specialized projects. Microsoft Dynamics AX 2012's unique layered architecture also allows seamless integration with industry specific vertical add-on solutions.

KEY BENEFITS

- End-to-end management of complex projects.
- Role-Tailored functionality and reporting.
